Inspiration for Integration: Interpreting International Trade and Investment Accords for Sustainable Development

Marie-Claire Cordonier Segger*

This article considers whether States have obligations, in international law, to proactively integrate environmental and social considerations into economic decision-making for sustainable development. In an era of international cooperation shaped inter-actionally by several decades of global debate, culminating in the adoption of universal Sustainable Development Goals (SDGs) at the United Nations, the article considers opportunities to support sustainable development through the interpretation and implementation of international economic treaty law and practice. In particular, the article comparatively discusses a new generation of trade and investment treaties that explicitly mention sustainable development as part of the object and purpose, examining approaches which can define and characterise the Parties' commitments. The article briefly offers considerations for a regulator, arbitrator or jurist seeking to interpret, in accordance with the Vienna Convention on the Law of Treaties1 (“VCLT”), a diverse range of environmental and social development provisions that are increasingly being integrated into international economic agreements.

IV. **Conclusions**

We assume a collective responsibility to advance and strengthen the interdependent and mutually reinforcing pillars of sustainable development - economic development, social development and environmental protection - at the local, national, regional and global levels.  

When States commit to promote sustainable development in a trade or investment treaty, or agree to conduct their economic relations in accordance with a principle of sustainable development, the implications of this commitment are not obvious in international law or policy.

In recent decades, there has been extensive international treaty-making on the protection of the environment. Many multilateral environmental accords (“MEAs”) contain provisions to secure sustainable development

---

in different ways, across diverse fields. Parallel to these MEAs, international economic treaties are being negotiated and adopted. While it is less documented, a growing number of these accords also address sustainable development, including in the World Trade Organisation ("WTO") and an increasing range of Regional Trade Agreements. As the WTO Appellate Body noted in the 1998 US-Shrimp Dispute:

\[\text{[t]he preamble of the WTO Agreement — which informs not only the GATT 1994, but also the other covered agreements — explicitly acknowledges “the objective of sustainable development”.}\]

The WTO also recognised in the corresponding footnote that “[t]his concept has been generally accepted as integrating economic and social

development and environmental protection”.  

There may be sound policy reasons for this economic law trend. As will be discussed below, the principle that environmental priorities must be integrated in economic development decision-making is gaining traction, and international trade and investment law and policy is part of economic decision-making. The need to take both environmental and social priorities into account in efforts to achieve sustainable economic development is also increasingly recognised, as reflected in the consensus of the United Nations in the 2015 Declaration on Transforming our World: The 2030 Agenda for Sustainable Development, with its 17 universal Sustainable Development Goals (“SDGs”), in the 2012 Declaration on The Future We Want from the UN Conference on Sustainable Development, in the 2002 outcomes of World Summit on Sustainable Development (“WSSD”), and other inter-actional international discussions. However, there remains comparatively little legal scholarship or analysis on how trade and investment rules can affect a State’s potential for sustainable development, and how trade and investment treaties might be interpreted to foster rather than frustrate

9. Award in the Arbitration Regarding the Iron Rhine (Ijzeren Rijn) Railway (Kingdom of Belgium v Kingdom of the Netherlands) (2005), 2007 Permanent Court of Arbitration Award Series at paras 58-59 (Permanent Court of Arbitration) [Iron Rhine].

Do States have binding hard, customary or soft law obligations, in international law, to proactively integrate environmental and social considerations into economic decision-making for sustainable development? If sustainable development commitments are taken seriously, what does this mean for international economic treaty law and practice? This article analyses a new generation of trade and investment treaties relating to sustainable development, examining approaches which can define and characterise Parties’ commitments to sustainable development. The article briefly discusses options for a regulator, arbitrator or jurist seeking to interpret, in accordance with the \textit{VCLT}, an increasingly diverse range of environmental and social development provisions found today in economic agreements.

I. Policy and “Soft Law” Rationales for Addressing Social and Environmental Concerns in Economic Treaties

Commitments to sustainable development are increasingly found, not just as provisions of environmental agreements, but also in accords related mainly to human rights and social concerns, and in treaties focused on economic development.\footnote{See e.g. Marie-Claire Cordonier Segger & Ashfaq Khalfan, \textit{Sustainable Development Law: Principles, Practice and Prospects} (Oxford: Oxford University Press, 2004).} This should not be surprising. Taken together, the range of trade and investment treaty impact assessments
commissioned by States over recent decades raises concerns about the potential effects of new global and regional economic agreements.\textsuperscript{13} Assessment findings suggest that trade and investment liberalisation agreements can lead to environmental and social impacts. Potential and actual impacts may depend on the specifics of each accord, which are often shaped by pre-existing economic relationships of the trading partners, the types of industries and sectors that are stimulated by the treaty, the perceived effectiveness of existing measures to protect or improve environmental protection and social development in relation to trade and investment led economic growth within the territory of the Parties to the accord, and other factors.

One response to concerns regarding impacts of trade treaties, advocated by neo-liberal economic and legal scholars, may be to simply let burdens fall where they may.\textsuperscript{14} From this view, sovereign States negotiate trade treaties, and are surely in the best position to decide what

\textsuperscript{13} See e.g. Gehring & Cordonier Segger, Sustainable Development in World Trade Law, supra note 5; Marie-Claire Cordonier Segger, Markus W Gehring & Andrew Newcombe, eds, Sustainable Development in World Investment Law (The Netherlands: Kluwer Law International, 2011). See also online compilations of EU Sustainability Impact Assessments of Trade Agreements, US Environmental Reviews of Trade Agreements, US Labour Reviews of Trade Agreements, Canadian Environmental Assessments of Trade Agreements, etc.

risks and impacts are most acceptable to their national interests. Just as the benefits of trade agreements will accrue to those States most astute in securing them, so should the costs fall upon the governments and citizens of those less wary. Higher social and environmental standards may even be inappropriate to the special circumstances of certain States, limiting the comparative advantages of developing countries in trade. Attempts to address or integrate social and environmental concerns into trade negotiations, from such perspectives, would be simply “disguised protectionism”, to be rejected or at least addressed separately from “pure” economic law. From this view, the only purpose of a trade or investment agreement is to accelerate economic growth by exploiting comparative advantage, and any other “non-trade” issue should be regarded with extreme caution. For many, however, this position is no longer realistic, due to both policy and emerging inter-actional legal reasons.

Recent decades of trade and investment treaty-making take place against a backdrop of broader international policy debates in which States have not been silent on linkages with environmental, human rights, and sustainable development considerations. Legal literature covers trade

and investment linkages with human rights,\textsuperscript{20} as canvassed in the 1995 Copenhagen United Nations Conference on Social Development,\textsuperscript{21} the 2002 Monterrey International Conference on Financing for Development,\textsuperscript{22} and later events. Environmental aspects of these global policy debates are also documented in the leading international environmental law texts.\textsuperscript{23} International debates on globalisation are also analysed in studies of international law in the field of sustainable development.\textsuperscript{24} On sustainable development, international discussions began before the 1972 United Nations Conference on the Human Environment\textsuperscript{25} (“UNCHE”) and were informed by the 1987 World Commission on Environment and Development (“WCED”) mandate.\textsuperscript{26}

\textsuperscript{26} \textit{Process of preparation of the Environmental Perspective to the Year 2000 and Beyond}, GA Res 16, UNGAOR, 38th Sess, UN Doc A/RES/38/16 (1983) [UNGA, \textit{Process of preparation}].
and Report. Through the 1992 Rio Conference on Environment and Development (“UNCED”), a series of regional sustainable development summits such as the 1996 Summit of the Americas on Sustainable Development, the 1997 United Nations General Assembly Special Session on Sustainable Development, and the 2002 WSSD, a certain consensus on the challenges began to emerge. In an attempt to address these challenges constructively, in the 2012 United Nations Conference on Sustainable Development, States called for a “green economy in the context of sustainable development and poverty eradication”.

Through the ‘soft law’ consensus declarations emerging from these

29. Declaration of Santa Cruz de la Sierra Summit of the Americas on Sustainable Development (7-8 December 1996) Santa Cruz de la Sierra, Bolivia, online: <www.summit-americas.org/summit_sd.html>.

31. The Future We Want, supra note 10.

events, it is possible to trace a growing clarification of the relationship between trade and investment law, and sustainable development. These debates reveal sound policy justifications for the proposal that negative social and environmental impacts of trade liberalisation should not simply be left to “fall where they may” onto the most vulnerable groups in developing State Parties to economic agreements, or kept completely separate from trade and investment policy.

The 1972 Declaration of the United Nations Conference on the Human Environment (“Stockholm Declaration”), by focusing on the need for

financial assistance and economic stability, in Principles 9 and 10 located “the debate on the environment clearly in the context of the international economy”.35 States also recognised in Principle 8, that “economic and social development is essential ... for the improvement of the quality of life”,36 and agreed in Principle 14 on the need for rational planning to reconcile conflicts “between the needs of development and the need to protect and improve the environment”.37 The UNCHE also increased the impetus for certain MEAs that use specific trade obligations as incentives to secure compliance, such as the Montreal Protocol.38

After Stockholm, the 1983 WCED was given a mandate to discuss trade matters.39 In its seminal 1987 Report, Our Common Future,40 the WCED called for a “sustainable world economy”.41 At that time, the WCED also found that:

... these issues have not been taken up systematically by intergovernmental organizations. The mandates of ... GATT and UNCTAD — should include sustainable development. Their activities should reflect concern with the impacts of trading patterns on the environment and the need for more effective instruments to integrate environment and development concerns into

36. *Ibid* at 8.

Agreed by consensus in the 1992 UNCED, the 1992 *Rio Declaration on Environment and Development* \(^{43}\) ("*Rio Declaration*") and Agenda 21 \(^{44}\) further elaborated the links between economic law and sustainable development. \(^{45}\) At Principle 2, States recognised both their sovereign rights to exploit their own resources pursuant to their own environmental and developmental policies, and their responsibility to ensure they do not cause damage to others. \(^{46}\) Principle 27 calls for “the further development of international law in the field of sustainable development”, and Principle 12 focuses on international trade, calling for a “supportive and open international economic system that would lead to economic growth and sustainable development”. \(^{47}\) In Principle 4, States declared that “in order to achieve sustainable development, environmental protection shall constitute an integral part of the development process and cannot be considered in isolation from it”. \(^{48}\) The *Rio Declaration* also highlighted the need for procedural innovations such as impact assessment and public participation mechanisms. Agenda 21 called for further efforts to codify and develop “international law on sustainable development”, \(^{49}\) and recognises the need to bring international economic law into accordance with the rest of this international law. \(^{50}\) Although a section on “making

trade and the environment mutually supportive” is mainly cited, policy guidance on trade, investment and sustainable development for States is actually found throughout Agenda 21 in diverse sections on social and economic dimensions, conservation and management of resources for development, strengthening the role of major groups, and various means of implementation.

By 1992, through consensus, States had affirmed the need for an open, rule-based, non-discriminatory, equitable, secure and transparent multilateral trading system. They reaffirmed the 1972 Stockholm Declaration principle that certain social and environmental standards may not be appropriate in all countries. But there is no indication that States intended for developing countries to bear significant risks from negative social and environmental impacts related to trade and investment liberalisation. Indeed, the opposite is constantly repeated. Global agendas called for the international economy to “provide a supportive international climate for achieving environment and development goals” through four principal sets of policies: (a) promoting sustainable development through trade; (b) making trade and environment mutually supportive; (c) providing adequate financial resources to developing countries; and (d) encouraging

economic policies conducive to environment and development.\textsuperscript{56} They highlighted the need for global efforts to build consensus on the intersections of environment, trade and development issues, both through existing international forums and in the domestic policy of each country.\textsuperscript{57} Indeed, UNCED led to the signing of three international treaties which each aimed to achieve sustainable development in different ways, with distinct linkages to international economic policy and law: the 1992 \textit{UN Framework Convention on Climate Change}\textsuperscript{58} ("\textit{UNFCCC}"), the 1992 \textit{UN Convention on Biological Diversity}\textsuperscript{59} ("\textit{UNCBD}") and the 1994 \textit{UN Convention to Combat Desertification}\textsuperscript{60}.

UNCED created a United Nations Commission for Sustainable

\textsuperscript{56} \textit{Agenda 21}, supra note 44 at paras 2.3, 2.43-2.5.
\textsuperscript{57} \textit{Ibid} at para 2.4.
Development (“UNCSD”), which served for two decades as a forum for consensus-building. In its discussions, the UNCSD expressed concerns about failure to adequately address economic and sustainable development links, including in the UNCSD Third Session, and UNCSD Eighth Session. In the 1997 United Nations General Assembly Special Session on Sustainable Development (Earth Summit+5) (“UNGASS”) Programme for the Further Implementation of Agenda 21, States laid out a further agenda for trade to support sustainable development, also highlighting the need to “further strengthen and codify international law related to sustainable development”. States agreed that:

[in order to accelerate economic growth, poverty eradication and environmental protection, particularly in developing countries, there is a need to establish … instruments and structures enabling all countries, in particular developing countries, to benefit from globalization … There should be a balanced and integrated approach to trade and sustainable development, based on a combination of trade liberalization, economic development and environmental protection.]

In the 1997 UNGASS Programme, both procedural and substantive guidance can be found for this “integrated approach”. States noted

64. UNGASS, Programme for the Further Implementation of Agenda 21, supra note 30.

65. Ibid at paras 109-10.

66. Ibid at para 29.
that further liberalisation of trade should take effects on sustainable development into account, urging national governments to make every effort to ensure policy coordination on trade, environment and development in support of sustainable development. They identified the need for renewed system-wide efforts to ensure greater responsiveness to sustainable development objectives, recommending strengthened cooperation and support for capacity-building in trade, environment and development at both international and national levels, for international cooperation to ensure mutual supportiveness among economic and environmental agreements, and for trade liberalisation to be accompanied by new policies for more efficient allocation and use of resources. The GA also warned that “any future agreements on investments should take into account the objectives of sustainable development and, when developing countries are Parties to these agreements, special attention should be given to their needs for investment”. Responses were uneven, however, and in a ten-year review at the 2002 WSSD, States re-focused on means to better implement sustainable development commitments. In the 2002 Johannesburg Plan of Implementation (“JPOI”), States established a broadened institutional architecture for sustainable development, to further implement Agenda 21 and the WSSD outcomes, and to meet emerging sustainable

67. Ibid.
68. Ibid at para 29(g).
development challenges.\textsuperscript{72} In \textit{JPOI} Chapter XI, economic institutions such as the WTO and regional trade bodies were tasked to enhance their work to realise sustainable development objectives.\textsuperscript{73} Rather than repeating the UNCED and UNGASS texts, the guidance on trade and sustainable development is brief, with a change in tone that strongly focuses the agenda on the social development dimensions of trade and investment policy. States noted that “[g]lobalization offers opportunities and challenges for sustainable development”\textsuperscript{74} and emphasised the special difficulties faced by developing countries, calling for globalisation to become fully inclusive and equitable. In addition to calls for WTO trade negotiations to take development concerns into account, the need to strengthen “regional trade and cooperation agreements... with a view to achieving the objectives of sustainable development” was highlighted.\textsuperscript{75} At X, as a means of implementing sustainable development, an agenda for integrating social development and environmental priorities into global and regional trade negotiations was set forth.\textsuperscript{76} States, \textit{inter alia}, called for “efforts to promote cooperation on trade, environment and development”; “the voluntary use of environmental impact assessments as an important national-level tool to better identify trade, environment and development inter-linkages ...”; and “further action ... to enhance the benefits, in particular for developing countries ... of trade liberalization” and to “establish and strengthen existing trade and cooperation agreements ... with a view to achieving sustainable development”.\textsuperscript{77} While WSSD outcomes may be hortatory, this clear consensus was made available to guide and influence future treaty-making.

This approach was emphasized in the 2015 Declaration \textit{Transforming

\textsuperscript{73}\textit{JPOI}, supra note 70 at paras 47-48, 51, 151, 154-55, 158-61.

\textsuperscript{74}\textit{Ibid} at paras 47-52.

\textsuperscript{75}\textit{Ibid} paras 90-100.

\textsuperscript{77}\textit{Ibid} at paras 90-100.
Our World: The 2030 Agenda for Sustainable Development. At paragraph 2, States committed by consensus to achieve “sustainable development in its three dimensions – economic, social and environmental – in a balanced and integrated manner” and at paragraph 3, they resolved to create conditions for sustainable, inclusive and sustained economic growth. At paragraph 18, States reaffirmed their commitment to international law, and at paragraph 30 urged each other to refrain from “any unilateral economic, financial or trade measures not in accordance with international law ... that impede the full achievement of economic and social development” particularly for developing countries. Annexed, in the SDGs, trade and investment were characterised as a means of implementation for sustainable development. SDG 8 commits to “promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all”, including by, inter alia, increasing aid for trade support. SDG 9 commits to “build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation”. At SDG 17.5, States agreed to “adopt and implement investment promotion regimes for least developed countries” and at SDG 17.11 they called to significantly increase the exports of developing countries. At the same time, at SDG 10.a, States also committed to “implement the principle of special and differential treatment for developing countries, in particular least developed countries, in accordance with [WTO] agreements”. The trade and investment being promoted is expected to be coherent, integrated, pro-poor – sustainable. For instance, at SDG 17.13-14, States highlighted the need to enhance global macroeconomic stability through policy coordination and policy coherence for sustainable development, while at SDG 17.15 they agreed to respect “each country’s policy space and leadership to establish and implement policies for poverty eradication and sustainable development”. Indeed, at paragraph 68, States explicitly underscore that “international trade is an engine for inclusive economic growth and poverty reduction”, but one which “contributes to the promotion of

78. Transforming our World, supra note 10.
sustainable development”.79

In all, there is scant indication from the global consensus statements of the 1972 UNCHE, the 1992 UNCED, the UNCSD deliberations, the 1997 UNGASS, the 2002 WSSD, the 2012 UNCSD, or the 2015 SDGs, that the risks and burdens of trade-led economic growth should be left to fall upon the most vulnerable in developing country trading partners, or that social and environmental decision-making should be kept separate from trade law. Indeed, the opposite is prioritised, though much remains to be done.

The 1992 Rio Declaration and other documents are not hard, binding international law: indeed, they are often cited as the quintessential examples of soft law.80 However, soft law can be relevant to the future development of international law, in a more nuanced manner than the hard law found in treaties, established customary rules, or other formal sources recognised in Article 38 of the 1946 Statute of the International Court of Justice.81 Soft law norms and standards can evolve into binding obligations upon States through subsequent negotiation of international treaties or eventual recognition as international customary rules.82 In an inter-actional manner, the initial phases of development of new international treaty regimes, including recognition of relevant legal principles, can be shaped by the inter-State debates and consensus

79. Ibid.
80. See supra note 33 for the nuances of soft law.
81. SICJ, supra note 33, art 38.
building that characterises these processes. Indeed, taking into account the doctrine of good faith in international law, very widely-supported soft law may generate *legitimate expectations* among other States. Such expectations may not be decisive, as they can be rebutted, for instance through explicit statements that a particular ‘soft law’ standard, principle or policy consensus is not applicable in the circumstances, but in this case the preponderance of unanimous guidance is convincing. Certain conclusions can be drawn with respect to State intentions for the trade and sustainable development relationship.

First, economic policies and agreements are not intended to constrain the adoption and enforcement of legitimate new environment and social development measures, nor to make it more inherently difficult to implement specific obligations from international treaties. Rather, the consensus declarations and instruments on these topics are replete with calls for trade policies to mutually support environment and development priorities in a balanced and integrated way for sustainable development.

---

86. UNGASS, *Programme for the Further Implementation*, *supra* note 30, in which States agreed at para 29 that “[t]here should be a balanced and integrated approach to trade and sustainable development, based on a combination of trade liberalization, economic development and environmental protection”.

to strengthen sustainable natural resources management,\footnote{Ibid, “[t]rade liberalization should be accompanied by environmental and resource management policies in order to realize its full potential contribution to improve environmental protection and the promotion of sustainable development through the more efficient allocation and use of resources.”} to strengthen and encourage environmental regulations and standards,\footnote{Commission on Sustainable Development, Report on the Fourth Session, UNCSDB, Supp No 8, UN Doc E/1996/28 (1996) (“[s]tresses that it would be inappropriate to relax environmental laws, regulations and standards or their enforcement in order to encourage foreign direct investment or to promote exports” Decision 4/1, 4(c)) [UNCSD, Fourth Session Report].} and to support poverty eradication, including through the realisation of human rights.\footnote{JPOI, supra note 70 at paras 7-13.}

Second, trade and investment policies and agreements are not expected to create incentives for trade-led economic growth that will add to serious environmental and social problems which already exist at domestic levels, and curtail the enforcement of laws intended to support sustainable development, especially in developing countries. Rather, the detailed action plans and other “soft law” instruments on these topics emphasise and re-emphasise an urgent need for accompanying cooperative measures to increase social and environmental regulatory capacity and provide technical assistance,\footnote{UNCSD, Fourth Session Report, supra note 88 “[r]ecognizes that positive measures, such as improved market access, capacity-building, improved access to finance, and access to and transfer of technology, taking into account the relationship between trade-related agreements and technology, are effective instruments for assisting developing countries in meeting multilaterally agreed targets in keeping with the principle of common but differentiated responsibilities” Decision 4/1, 3(b).} and for cooperative measures to generate new and additional financial, human and other resources to address environmental or developmental challenges associated with trade.
and investment treaties.\textsuperscript{91}

Third, and perhaps most challenging, trade and investment policies and treaties need not serve to encourage \textit{unsustainable growth} in obsolete technologies, goods or economic sectors, or to stimulate, through pollution havens, subsidies and other means, the growth of these sectors. Soft law declarations continue to firmly call for the phase-out of such measures.\textsuperscript{92} States have not committed to support the imposition of social or environmental standards that are not appropriate for developing countries. However, in internationally negotiated treaties, resolutions, standards and guidelines, States are calling for measures to encourage \textit{increased} trade and investment in more sustainable low-carbon technologies,\textsuperscript{93} the sustainable use of genetic resources,\textsuperscript{94} more sustainably

\begin{itemize}
\item \textsuperscript{91} UNGASS, \textit{Programme for Further Implementation}, \textit{supra} note 30 notes “[t]he multilateral trading system should have the capacity to further integrate environmental considerations and enhance its contribution to sustainable development, without undermining its open, equitable and non-discriminatory character. The special and differential treatment for developing countries, especially the least developed countries, and the other commitments of the Uruguay Round of multilateral trade negotiations 18 should be fully implemented in order to enable those countries to benefit from the international trading system, while conserving the environment” at para 29.
\item \textsuperscript{92} \textit{The Future We Want}, \textit{supra} note 10 reaffirms calls for phase out of subsidies that impede the transition to sustainable development, including those on fossil fuels, unsustainable agriculture and fisheries, at para 126.
\item \textsuperscript{94} \textit{Decisions Adopted by the Conference of the Parties to the Convention on Biological Diversity at its Tenth Meeting} (Nagoya, Japan, 18-29 October 2010) Decision X/1; UNEP & IISD, \textit{Environment and Trade}, \textit{supra} note 38 at 55-56; Mary Seely et al, “Creative Problem Solving in Support of Biodiversity Conservation” (2003) 54:1 Journal of Arid Environments 155.
\end{itemize}
produced or harvested goods, environmental goods and services, and pesticide-free products.

In summary, there is a convincing international policy rationale for States to undertake measures to prevent, or at least mitigate, the environment and social development impacts of trade and investment agreements, addressing the main tensions identified between trade and sustainability. States have repeatedly committed, in consensus declarations of principles, detailed action plans, UN conference debates, solemn resolutions, and international guidelines and agreements.

95. UNGASS, Programme for Further Implementation, supra note 30 in which States find, “[t]rade obstacles should be removed with a view to contributing to the achieving of more efficient use of the earth’s natural resources in both economic and environmental terms” at para 29.

99. Agenda 21, supra note 44; Report of the WSSD, supra note 71.

100. See e.g. IISD Reporting Services, “Summary of the First Prepcom for the UN Conference on Sustainable Development” (21 May 2010) Winnipeg: IISD, 2010.

101. UNGASS, Programme for Further Implementation of Agenda 21, supra note 30.
standards,\textsuperscript{102} to make increased efforts to ensure that trade can support sustainable development, especially in developing countries. It can be argued that States are justified in forming legitimate expectations about sustainable development in trade negotiations.\textsuperscript{103} In this context, it is not credible to maintain that negative social and environmental effects of economic agreements should be simply left to roll downhill onto the weakest Parties. Rather, it can be suggested, States agree in practice that where possible in economic agreements, measures can and should be taken. Absent explicit instructions to the contrary, both developed and developing country Parties to such negotiations should be able to rely on these expectations.

\textbf{II. International Legal Reasons for Countries to Address Environmental and Social Impacts of Trade and Investment Agreements}

There are important international policy and soft law reasons that the impacts of trade and investment liberalisation should not simply be left to “fall where they may” onto the fragile ecosystems and vulnerable populations of developing country trading partners. Are there also international hard law considerations?

States could also be legally bound to address the sustainability impacts of economic liberalisation – not just to prevent harm, but to actually integrate environmental and social development considerations in order to strengthen and enhance the contribution of trade to sustainable development. To determine whether it is the case, an examination of customary and interstitial norms can be carried out. Noting the relevance of \textit{pacta sunt servanda}, it remains to be considered whether international law requires States to integrate significant environmental and social considerations into economic development plans, including into the negotiations of new trade and investment agreements.

\textsuperscript{102} See \textit{e.g.} EC, Commission, \textit{Impact Assessment Guidelines} (Brussels: EC, 2005).

\textsuperscript{103} Phillip Allot, \textit{The Health of Nations: Society and Law beyond the State} (Cambridge: Cambridge University Press, 2002).
A. Sustainable Development as an Interstitial Norm

Beyond soft law policy rationales, are there any legal obligations for States to promote sustainable development through trade and investment? The legal status of State commitments to sustainable development has been debated in academic literature for two decades. Certain States, scholars and NGOs argued that the obligation to develop sustainably is a new customary principle of international law, binding upon all but a few persistently objecting States. However, as Gunter Handl argued in 1990, “[n]ormative uncertainty, coupled with the absence of justiciable standards for review, strongly suggest that there is as yet no international legal obligation that development must be sustainable,” and that as such “decisions on what constitutes sustainability rest primarily with individual

105. governments”. As Vaughan Lowe notes wryly, “the argument that sustainable development is a norm of customary international law, binding on and directing the conduct of states, and which can be applied by tribunals, is not sustainable”. It is not novel to conclude that States have not yet accepted a customary legal obligation to always develop sustainably. Indeed, a search for one agreed customary norm that development must be sustainable might actually steer one in the wrong direction.

As observed by the revered late Judge Weeramantry in his extraordinary Separate Opinion in the Case Concerning the Gabčikovo-Nagymaros Project (Hungary v Slovakia) (“Gabčikovo-Nagymaros Case”), there is “wide and general acceptance by the global community” of sustainable development. The concept has become legally relevant, informing tribunals and treaties, particularly in its procedural dimensions. As Lowe has further argued, State commitments to sustainable development might engage a certain interstitial normativity, acting “upon other legal norms”.  

107. Boyle & Freestone, supra note 11 at 16.
111. Ibid at 95.
rules and principles – a legal concept exercising a kind of interstitial normativity, pushing and pulling the boundaries of true primary norms when they threaten to overlap or conflict with each other”.

There is:

an immense gravitational pull exerted by concepts such as sustainable development, regardless of their standing as rules or principles of lex lata. That is plain when they are used by judges as modifiers; but it is also true when they are used in the same way by states as they negotiate (either with other states, or within their own governmental apparatus) on ways of reconciling conflicting principles.

As an interstitial norm which can play a role in importing a “group of congruent norms”, the broadly held commitment to promote sustainable development may push or pull States to use and apply certain international practices and even other emerging customary principles, to guide the future development and implementation of treaty regimes. From an inter-actional perspective, sustainable development commitments can be argued to be shaping the initial phases of development of new international treaty regimes, including relevant legal principles. Taking this inter-actional account seriously, global commitments to sustainable development can engender further normative consequences for States’ economic development planning, including in their negotiations of trade and investment agreements. Such further principles for sustainable development may become recognised as customary rules, binding on all

115. Ibid at 26.
116. Brunnée & Toope, Legitimacy and Legality in International Law, supra note 83.
States that have not persistently objected. From this perspective, it is important to consider which, of such principles, could be most relevant to economic treaty negotiation and interpretation.

B. Integration as an International Customary Norm of Relevance to Trade and Sustainable Development

The process of crystallising principles of international law related to sustainable development has been complex, and is not yet complete. The most important undertakings emerged from the global debates. In the 1987 Annex on Legal Principles to the Brundtland Report, the WCED called for the international adoption of legal principles to promote sustainable development. The Commission provided a considered legal analysis, commentary and clear normative proposals for a series of 22 legal principles. In Article 7, the experts recommended recognition of the principle that the conservation of natural resources and the environment shall be treated as an integral part of the planning and implementation of development activities. The 1992 Rio Declaration echoed many of the Principles recommended by the Brundtland Report, and was followed by the Report of the Expert Group Meeting on Identification of Principles of International Law for Sustainable Development, commissioned by the United Nations Division for Sustainable Development in accordance with a request of States at the UCSD Second Session in 1994. This Report identified 19 principles and concepts of international law for

117. Cordonier Segger & Khalfan, supra note 12 at 47-50 (wide-spread adoption of such principles in the 1992 Rio Treaties, might even support a contention that certain principles are already gaining this level of recognition. The practical implications of such recognitions, given that the nearly universal membership of these treaties, might be minimal. But it does not discount the value of examining these principles themselves, particularly if they could also be relevant to trade law and policy).

118. WCED, Our Common Future, supra note 27 at 65.

119. Ibid.

sustainable development in the context of international legal instruments of that time, though it was not exhaustive. In 1997, in light of the recommendations of the Report, States noted in the Programme for Further Implementation of Agenda 21\textsuperscript{121} that: “[w]hile some progress has been made in implementing United Nations Conference on Environment and Development commitments through a variety of international legal instruments, much remains to be done to embody the Rio principles more firmly in law and practice”.\textsuperscript{122}

Building on these processes, in 2002 at its 70th Conference in New Delhi,\textsuperscript{123} the International Law Association’s Committee on the Legal Aspects of Sustainable Development released a Declaration of Principles of International Law Relating to Sustainable Development\textsuperscript{124} (“New Delhi Declaration”). As noted in the Declaration, it was found that “sustainable development is now widely accepted as a global objective and that the concept has been amply recognised in various international and national legal instruments, including treaty law and jurisprudence at international and national levels …”\textsuperscript{125} and that seven principles of international

\textsuperscript{121} UNGASS, Programme for Further Implementation, supra note 30.

\textsuperscript{122} Ibid at para 14 (the General Assembly also noted that “[p]rogress has been made in incorporating the principles contained in the Rio Declaration on Environment and Development – including the principle of common but differentiated responsibilities, which embodies the important concept of and basis for international partnership; the precautionary principle; the polluter pays principle; and the environmental impact assessment principle – in a variety of international and national legal instruments”, ibid).

\textsuperscript{123} (2-6 April 2002), New Delhi, India.

\textsuperscript{125} New Delhi Declaration, ibid at 211.
law on sustainable development could be outlined.\textsuperscript{126} Analysis of each principle in the \textit{New Delhi Declaration}, documenting both relevance and doubts as to international legal status, is available elsewhere.\textsuperscript{127} However, among these seven principles identified in the \textit{New Delhi Declaration} reappeared a duty to integrate environmental and social considerations into economic decision-making.\textsuperscript{128} This built on Principle 4 of the \textit{Rio Declaration}, which stated that: “\textit{in order to achieve sustainable development, environmental protection shall constitute an integral part of the development process and cannot be considered in isolation from it}”.\textsuperscript{129}

If one customary international rule named a “sustainable development principle” were to be recognised, given its first six words Principle 4 of the \textit{Rio Declaration} seems a likely candidate. However, as found in the \textit{New Delhi Declaration}, this norm could also simply called the “integration principle”. The \textit{New Delhi Declaration} emphasises recent developments in soft law, such as the need to recognise the social and human rights pillar of sustainable development, essentially advocating an integration principle which requires States to take social and human rights, as well

\textsuperscript{126} \textit{Ibid} at 213-16.
\textsuperscript{128} \textit{Ibid}.
\textsuperscript{129} \textit{Rio Declaration, supra} note 28, Principle 4.
as environmental protection, into account in the development process.\footnote{130} Such an integration principle could be considered an emerging customary norm.

As noted in the 1903 \textit{Gentini Case (Italy v Venezuela)},\footnote{131} a principle “expresses a general truth, which guides our action, serves as a theoretical basis for the various acts of our life, and the application of which to reality produces a given consequence”\footnote{132}. As argued by Professor Martii Koskenniemi more recently, when “States enter an agreement, or when some behaviour is understood to turn from habit into custom, the assumption is that something that was loose and disputed crystallises into something that is fixed and no longer negotiable”\footnote{133}. Customary principles, if recognised, can establish obligations for all States except those which have persistently objected to a practice and its legal consequences.\footnote{134}

According to Article 38(1)(b) of the \textit{SICJ}: “[t]he Court, whose
function is to decide in accordance with international law such disputes as are submitted to it, shall apply ... international custom, as evidence of a general practice accepted as law”.

These rules of international custom can be derived from the consistent conduct of States acting in the belief that international law requires them to so act, and jurists, to prove an international customary principle, must show State practice by demonstrating the widespread repetition by States of similar international acts over time. Such acts must be taken by a significant number of States, and not be rejected by too many others with an interest in the matter. The International Court of Justice ("ICJ") has stated that “it might be that, even without the passage of any considerable period of time, a very widespread and representative participation in the convention might suffice of itself, provided it included that of States whose interest were specifically affected”. The bar to rapidly transform a broadly practiced principle into one accepted as customary law, as set by the ICJ in the North Sea Continental Shelf Cases (Federal Republic of Germany v Denmark; Federal Republic of Germany v Netherlands) ("North Sea Continental Shelf Cases"), is relatively high:

an indispensable requirement would be that within the period in question, short though it might be, State practice, including that of States whose interests are specially affected, should have been both extensive and virtually uniform in

135. SICJ, supra note 33, art 38(1)(b); Charter of the United Nations, 26 June 1945, Can TS 1945 No 7 (entered into force 24 October 1945); see also Shaw, supra note 134.
139. Ibid.
the sense of the provision invoked; — and should moreover have occurred in such a way as to show a general recognition that a rule of law or legal obligation is involved.140

The ICJ has also found that it is sufficient that the conduct of States should, in general, be consistent with a customary principle, and that instances of inconsistent conduct have been generally treated as breaches of the rule rather than indications of a new rule having emerged.141 If a norm has been accepted as a principle of customary international law, the international acts that follow the rule should occur out of sense of legal obligation. As noted by the ICJ, in the North Sea Continental Shelf Cases, “[t]he need for such a belief, i.e. the existence of a subjective element, is implicit in the very notion of the opinio juris sive necessitates”.142 Further, if a norm that is enshrined in a treaty is still followed in the practices of non-Parties, it can, provided that there is opinio juris, lead to the evolution of a customary rule which will be applicable between states that are not Party to the treaty and between Parties and non-Parties, even before the treaty has entered into force.143 However, as was demonstrated in the Fisheries Case (United Kingdom v Norway)144 at the ICJ, a State can avoid being bound by a customary rule if it persistently objects to that rule.145

Before a discussion of general State practice and opinio juris, a further potential “precondition” should also be addressed. To prove the existence of a norm of customary law, there is a need to show that State practice and opinio juris has been extensive and virtually uniform in the sense of the provision invoked. This element relates to the requirement that a principle have the “fundamentally norm-creating character such as could be regarded as forming the basis of a general rule”.146 Several

legal scholars have been critical of whether such a precondition is needed at all in the context of treaties and custom. However as others such as Hans Kelsen have noted, an international legal norm, whether derived from an international treaty or international customary law, should be understood in reference to its function. In international law, as Kelsen explains, most norms have one of four functions. Either they impose an obligation on States to do something, as a command (prescriptive norms); or they impose an obligation on States not to do something, as a prohibition (prohibitive norms). They can also grant a right to a State not to do something, as an exemption (exempting norms), or grant a right to a state to do something, as a form of permission (permissive norms).

Indeed, if “integration” were proposed as a principle of customary law, there would need to be some clarity as to what the commitment actually prescribes, prohibits, exempts or permits States to do. Like a prohibition against armed attack, or a permission of each State to control an exclusive economic zone 200 miles from their coast, a commitment to integrate would normatively require or permit States to take (or not take) certain actions. A customary principle should be specific – or at least normative enough to form the basis of a claim against a State.

Could a requirement to “integrate social and environmental considerations into economic decision-making” be emerging as a customary rule? Certain guidance can be found in the decision of the ICJ

149. Ibid.
150. Ibid.
in the *Gabčikovo-Nagymaros* case. In that case, faced with the question as to whether one Party could compel another to continue building a dam in accordance with a treaty, in spite of concerns about the impacts of the project, the majority stated that:

Throughout the ages, mankind has, for economic and other reasons, constantly interfered with nature. In the past, this was often done without consideration of the effects upon the environment. Owing to new scientific insights and to a growing awareness of the risks for mankind – for present and future generations – of pursuit of such interventions at an unconsidered and unabated pace, new norms and standards have been developed, set forth in a great number of instruments during the last two decades. Such new norms have to be taken into consideration, and such new standards given proper weight, not only when States contemplate new activities but also when continuing with activities begun in the past. This need to reconcile economic development with protection of the environment is aptly expressed in the concept of sustainable development. For the purposes of the present case, this means that the Parties together should look afresh at the effects on the environment of the operation of the Gabčikovo power plant. In particular they must find a satisfactory solution for the volume of water to be released into the old bed of the Danube and into the side-arms on both sides of the river.\(^\text{152}\)

Perhaps only procedural requirements were imposed on the Parties, where they are required to “look afresh” at the effects.\(^\text{153}\) Indeed, it has been argued that the word “concept” was carefully chosen by the majority to defer recognition of custom.\(^\text{154}\) However, it can also be proposed that the Court ordered the Parties to integrate environmental protection into their development project by requiring them, after their assessment, to also “find a satisfactory solution”. From this view, the Court applied a nascent *principle of integration*, a requirement to reconcile economic development with the protection of the environment, *in order to achieve an objective of sustainable development*.

Review of the 2005 award of the Arbitral Tribunal in the *Arbitration Regarding the Iron Rhine (Ijzeren Rijn) Railway (Kingdom of Belgium v*...

\(^{152}\) *Gabčikovo-Nagymaros Case*, supra note 110 at paras 140-41 [emphasis added].

Kingdom of the Netherlands)\(^{155}\) (“Iron Rhine”) struck under the auspices of the Permanent Court of Arbitration lends support to this view. The Tribunal found that there is “considerable debate as to what … constitutes “rules” or “principles”; what is “soft law”; and which environmental treaty law or principles have contributed to the development of customary international law”.\(^{156}\) It further states that: “… [t]he emerging principles, whatever their current status, make reference to conservation, management, notions of prevention and of sustainable development, and protection for future generations…”\(^{157}\) As the Tribunal then explains:

It may be that the Court only meant that the “duty to prevent ... such harm” is an accepted principle. But it can be equally argued that an emerging principle to integrate environmental protection into the development process was further recognised by the Court. As explained: “[t]his principle applies not only in autonomous activities but also in activities undertaken in implementation of specific treaties between the Parties”.\(^{159}\) And as further noted: “[t]he reactivation of the Iron Rhine railway cannot be viewed in isolation from the environmental protection measures necessitated by the intended use of the railway line. These measures are to be fully integrated into the project and its costs”.\(^{160}\)

\(^{155}\) Iron Rhine, supra note 9.

\(^{156}\) Ibid at paras 58-59.

\(^{157}\) Ibid.

\(^{158}\) Ibid at para 59 [emphasis added].

\(^{159}\) Ibid.

\(^{160}\) Ibid at para 223 [emphasis added].
This suggests that the “duty to integrate appropriate environmental measures in the design and implementation of economic development activities”, as recognised by the Tribunal, could be recognised as a principle of customary law. Such a duty is normative. It is both corollary and an extension of the established duty that “where development may cause significant harm to the environment, there is a duty to prevent, or at least mitigate, such harm”.\footnote{Birnie, Boyle & Redgwell, supra note 3 at 137-52; Sands, Principles of International Environmental Law, supra note 3 at 241-46, 117.} This customary principle of integration, as highlighted in the 1972 \textit{Stockholm Declaration} at Principles 12 and 13, analysed in the 1987 Brundtland Report’s Legal Experts Group Recommendations at Article 7 on planning and implementation of development activities,\footnote{Stockholm Declaration, supra note 34 at 12-13; WCED, Our Common Future, supra note 27 at 65.} and further recognised in Principle 4 of the \textit{Rio Declaration}, can be characterised as \textit{lex ferenda}, an emerging customary norm.

For economic treaties, the principle is relevant to cases where the economic development activities involve measures to stimulate increases in trade and investment flows, particularly State initiatives undertaken in implementation of specific trade and investment treaties. While the international application of a customary principle may suggest that the rule is only relevant in a transboundary context, it is becoming rapidly recognised that ecological systems themselves are globally and regionally inter-related in complex ways that science and technology have only begun to discover.\footnote{Pushpam Kumar, ed, \textit{The Economics of Ecosystems and Biodiversity: Ecological and Economic Foundations} (London: Routledge, 2012).} Many environmental challenges have transboundary scope, from biodiversity and migratory species at risk, to transboundary watercourses, to oceans, to climate change and the global atmosphere.

The integration principle also has limits: “constituting an integral part” is not the same as “becoming a trump card”. Indeed, another ICJ case suggests outer boundaries for application of the emerging norm, also linked directly to sustainable development. Positive claims based on a State’s “sovereign right to implement sustainable economic development
projects were used by States in the 2006 *Case concerning Pulp Mills on the River Uruguay (Argentina v Uruguay)*. The ICJ notes that in pleadings on Provisional Measures in this case, Uruguay maintained that “the provisional measures sought by Argentina would ... therefore irreparably prejudice Uruguay’s sovereign right to implement sustainable economic development projects in its own territory”. Concern for this right appears in the ICJ’s reasoning in its initial Order with Regards to Provisional Measures, where the Court found that:

> the present case highlights the importance of the need to ensure environmental protection of shared natural resources while allowing for sustainable economic development ... it is in particular necessary to bear in mind the reliance of the Parties on the quality of the water of the River Uruguay for their livelihood and economic development ... from this point of view account must be taken of the need to safeguard the continued conservation of the river environment and the rights of economic development of the riparian States;

In the ICJ’s final Judgement for this case, this perspective is reinforced:

> … regarding Article 27, it is the view of the Court that its formulation reflects not only the need to reconcile the varied interests of riparian States in a transboundary context and in particular in the use of a shared natural resource, but also the need to strike a balance between the use of the waters and the protection of the river consistent with the objective of sustainable development ... The Court wishes to add that such utilization could not be considered to be equitable and reasonable if the interests of the other riparian State in the shared resource and the environmental protection of the latter were not taken into account. Consequently, it is the opinion of the Court that Article 27 embodies this interconnectedness between equitable and reasonable utilization of a shared resource and the balance between economic development and environmental protection that is the essence of sustainable development.

Principle 21 of the 1972 *Stockholm Declaration*, which was re-affirmed in Principle 2 of the *Rio Declaration*, recognises that:

> States have, in accordance with the Charter of the United Nations and the principles of international law, the sovereign right to exploit their own resources

---

166. Ibid.

167. Ibid at para 80 [emphasis added].

168. Ibid at para 177 [emphasis added].
pursuant to their own environmental and developmental policies, and the responsibility to ensure that activities within their jurisdiction or control do not cause damage to the environment of other States or of areas beyond the limits of national jurisdiction.\textsuperscript{169}

As noted by Schrijver and others, this principle of sovereignty over natural resources is well recognised in international law.\textsuperscript{170} Indeed, a right to sustainable use of natural resources, held by indigenous peoples against their own countries, and by States against other States, appears to be gaining further recognition in, for instance, recent decisions of regional human rights tribunals.\textsuperscript{171} This right to sustainable development, based on the principle of sovereignty and the duty to prevent activities within their control from causing damage outside their jurisdiction, provides the outer boundaries of the integration principle. It also obliquely addresses the social development dimension of sustainable development, as emphasized in the 2002 \textit{JPOI}, if overlaps or conflicts occur.\textsuperscript{172}

\begin{itemize}
\item \textsuperscript{169} Stockholm Declaration, \textit{supra} note 34, Principle 21.

\end{itemize}
An emerging customary “integration” principle does not provide a panacea for the process of treaty-making.\textsuperscript{173} States can deliberately elect to deviate from customary norms in their treaties, in accordance with the maxim \textit{pacta sunt servanda}, in all but a few instances.\textsuperscript{174} It also remains disputed, in international law, whether the emergence of a new customary rule would lead to the revision of an earlier treaty which contradicts the norm.\textsuperscript{175} But under the \textit{VCLT}, a customary norm of integration does become directly relevant for the \textit{interpretation} of trade and investment treaties by tribunals. Or, as is more common in this field, it can become relevant for interpretation of an economic agreement by a sustainable development regulator seeking to understand the limits of their discretion. As noted in Article 31(3)(c) of the \textit{VCLT}, a treaty shall be interpreted in good faith, in accordance with the ordinary meaning to be given to its terms in their context, and in the light of its object and purpose, and there shall be taken into account, together with the context, “any relevant rules

\begin{footnotesize}

\textsuperscript{174} For instance, a treaty that deviates from \textit{jus cogens} preremptory norms is invalid. See Hugh Thirlway, \textit{The Structure of International Legal Obligation}, in Malcolm Evans, ed, \textit{International Law}, 4d (Oxford: Oxford University Press, 2014) 117 at 137-38; Tim Hillier, \textit{Sourcebook on Public International Law} (London: Cavendish Publishing, 1998) at 74. See also \textit{Fisheries Case}, \textit{supra} note 143.

\textsuperscript{175} Hillier, \textit{ibid}, “[c]ustomary law and treaty have equal authority. However if there is a conflict between the two it is the treaty that prevails” at 65. See also \textit{Wimbledon Case} (1923), PCIJ (Ser A) No 1.
\end{footnotesize}
of international law applicable in the relations between the Parties”. While the integration rule may not trump a clear obligation to ignore all environmental and social consequences, such a provision might be hard to secure presently, given the inter-actional dynamics and consensus policy context discussed above. In its absence, the regulator or treaty interpreter could appeal to the integration principle in order to interpret obligations that might, if understood in particular sense, risk causing or exacerbating trade and investment-led social and environmental damage.

III. International Trade and Investment Agreements in Light of the Integration Principle

As highlighted by the Tribunal in the Iron Rhine award, Principle 4 of the 1992 Rio Declaration provides that “environmental protection shall constitute an integral part of the development process and cannot be considered in isolation from it”. Just as States negotiate to secure access to foreign markets through a trade accord, States may also be seeking to negotiate to ensure economic agreements do not lead to negative environmental and social consequences. This article concludes with a brief discussion of how the principle might assist in guiding the negotiation and

176. VCLT, supra note 1, art 31(3)(c); See Pauwelyn, supra note 172 at 241; Jacques-Michel Grossen, Les Presomptions en Droit International Public (Neuchatel & Paris: Delachaux & Niestle, 1954) at 114-17 (where it is argued that customary norms are included among relevant rules of international law applicable in the relations between the Parties). See also Ian Sinclair, The Vienna Convention on the Law of Treaties (Manchester: Manchester University Press, 1984) at 119 (who suggests art 32(3)(c) may be taken to include not only the general rules of international law but also treaty obligations existing for the Parties, as followed in Al-Adsani v United Kingdom, No 35763/97, [2001] XI ECHR 761 [Al-Adsani]). And see Philippe Sands, “Treaty, Custom and Cross-fertilization of International Law” (1998) 1:1 Yale Human Rights and Development Law Journal 85 at 102-03 (who notes that while these norms are relevant, the treaty being interpreted retains a primary role and “there can be no question of the customary norm displacing the treaty norm, either partly or wholly” at 103).

later interpretation of the provisions of trade and investment agreements, for the consideration of those developing new economic accords which make explicit commitments to sustainable development.

A. Addressing Sustainable Development Tensions in Trade and Investment Agreements through Integration

First, if sustainable development, as a policy objective, is explicitly recognised as part of the “object and purpose” of a trade agreement, might this recognition assist in treaty implementation? In international law, the object and purpose is important for interpretation. Article 31 of the VCLT, as a general rule of interpretation, provides at Article 31(1) that “A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose”. And at Article 31(2), the Convention further states that: “[t]he context for the purpose of the interpretation of a treaty shall comprise, in addition to the text, including its preamble and annexes …”. In essence, the ordinary meaning of the terms of a treaty, in their context and taking into account the treaty’s stated object and purpose, are taken together to guide a lawyer in understanding the

178. VCLT, supra note 1, art 2 (note also the relevance of “… (b) any instrument which was made by one or more parties in connection with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty … (b) any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation; …. A special meaning shall be given to a term if it is established that the parties so intended”. Also, art 32 permits recourse to supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion. These reflect pre-existing customary international law, applying to treaties concluded before the VCLT and also to non-Parties: Case Concerning the Territorial Dispute (Libyan Arab Jamahiriya v Chad), [1994] ICJ Rep 6; Kasikili/Sedudu Island (Botswana/Namibia), [1999] ICJ Rep 1045; Case Concerning Sovereignty over Pulau Ligitan and Pulau Sipadan (Indonesia v Malaysia), [2002] ICJ Rep 625 at paras 37-38).
intentions of the Parties, as the prevailing elements for interpretation.\textsuperscript{179} As explained by Professor Richard Gardiner, the “object and purpose function as a means of shedding light on the ordinary meaning” of a treaty.\textsuperscript{180}

This solution is not quite so simple, however. The precise nature and role of the “object and purpose” of a treaty remains something of an enigma in the law of treaties.\textsuperscript{181} The combining of “object” and “purpose” in the \textit{VCLT} has been ascribed in part to an ILC members’ suggestion in relation to the draft Article on \textit{pacta sunt servanda}, that “the English word ‘objects’ be better rendered in French by the expression ‘l’objet et la fin’... for the object of an obligation was one thing and its purpose was another”.\textsuperscript{182} In French public law, as Buffard and Zemanek explain, a distinction has developed between “l’objet” of a legal instrument, which refers to the means chosen by the Parties to create a set of rights and obligations, and “le but” which refers to the reason(s) for establishing “l’objet” of the accord.\textsuperscript{183} The term “object” indicates thus the substantial content of the norm, the provisions, rights and obligations created by the norm. The object of a treaty is the instrument for the achievement of the treaty’s purpose, and this purpose is, in turn, the general goal or result which the [P]arties want to achieve by the treaty”.\textsuperscript{184} As Gardiner notes, while the Preamble provides guidance to discern the object and purpose

\end{itemize}
of a treaty, the whole treaty text and associated matter listed in Article 31(2) should be taken into account as well. An object and purpose can also be discerned by comparing a treaty to others of its type, as the ICJ did in the Oil Platforms case by comparing the provisions of the 1955 Treaty of Amity, Economic Relations and Consular Rights between the United States of America and Iran,\(^{185}\) with others of treaties of friendship.\(^{186}\) This said, as the Appellate Body of the WTO has clarified, “most treaties have no single, undiluted object and purpose but rather a variety of different, and possibly conflicting, objects and purposes ... This is certainly true of the WTO Agreement”.\(^{187}\) Of importance for the instant discussion, the object and purpose of the treaty can be discerned, they are legally relevant for interpretation, and there may be more than one.

The object and purpose of a treaty is raised multiple times in the VCLT, serving, for instance, as a means to determine the incompatibility of a reservation at Article 19(c), as a possible characteristic of a multilateral treaty to which reservations require the consent of all Parties at Article 20(2), as a way to characterise the material breach of a treaty at Article 60(3)(b), and as part of general guidance for interpretation at Article 31(1).\(^{188}\) This last point is especially important, as it guides the implementation of the agreements, arguably including the further evolution of the treaty regimes themselves.\(^{189}\)

Taking the guidance of Gardiner, Buffet and Zemanek into account, it can be noted that sustainable development is reflected as a “purpose” for over thirty treaties which explicitly commit to achieve it across a range of very diverse sectors and ways – particularly those highlighted by States as delivery mechanisms for the 2002 JPOI, and the 2015 SDGs.\(^{190}\) As just

\(^{190}\) Cordonier Segger & Khalfan, supra note 12 at 45-50 lists the treaties explicitly highlighted as international law in the field of sustainable development in the 2002 WSSD JPOI, including those which contain key provisions on sustainable development in addition to other environment, economic or social purposes.
one example, in the *FAO Seed Treaty*, the Parties establish a Multilateral System for Access and Benefit-Sharing that is meant to provide an efficient, effective and transparent framework to facilitate access to plant genetic resources for food and agriculture, and to share the benefits in a fair and equitable way.\(^\text{191}\) In Objectives at Article 1.1, States agree that the “objectives of this Treaty are the conservation and *sustainable use of plant genetic resources for food and agriculture* and the fair and equitable sharing of the benefits arising out of their use, in harmony with the Convention on Biological Diversity, *for sustainable agriculture and food security*”.\(^\text{192}\) Sustainable use of plant genetic resources for food and agriculture is an “object” of this international treaty, and overall sustainable agriculture is set as one of two ultimate purposes.\(^\text{193}\) Further, the Parties include provisions in Article 6 to define what is meant by sustainable use, committing to develop and maintain legal measures in this respect. At Article 6.1, the Contracting Parties accept a duty to “develop and maintain appropriate policy and legal measures that promote the sustainable use of plant genetic resources for food and agriculture”.\(^\text{194}\) In Article 6.2, the Parties offer specific guidance what constitute these measures, for their treaty regime.\(^\text{195}\) Through careful debate in the treaty negotiations,\(^\text{196}\) further clarifications through the regime’s multi-lateral Conferences of the

Parties,197 guided by scholarly legal analysis, the regime has clarified their commitment to sustainable development.198 In this specific treaty sector, the Parties pinpointed the meaning of sustainable use of plant genetic resources for food and agriculture, and operationalised their commitment in the treaty by agreeing on a set of legal measures for implementation. Although sustainable development may be recognised in Preambles as part of the purpose of many trade and investment agreements,199 such legal clarity has only begun to be sought in the context of economic treaty law.200

B. Interpreting Sustainable Development Provisions in Economic Accords

While a joint intention of the Parties to promote sustainable development may be found in a trade or investment treaty Preamble, and may be considered part of the “object and purpose” of the accord in question, this recognition has limits. As Gardiner explains, according to the VCLT, though such recognition can shed light on the meaning of a provision within the context of the treaty itself, a broader or different “object and purpose” does not provide a valid means of challenging a clear operational term.201 Essentially, if a regulator from the EU or another Party sought to demonstrate that a clear obligation in a trade accord should be interpreted to accommodate the tensions identified above, in order to integrate environmental and social considerations, reference to a Preambular

commitment alone may not provide the strongest guidance.\textsuperscript{202}

The \textit{VCLT}, as noted earlier, enshrines customary rules of treaty interpretation. Article 30 governs the application of successive treaties relating to the same subject-matter, and may assist in the interpretation of treaty obligations which appear to differ, from sustainability commitments that are enshrined in other accords.\textsuperscript{203} Indeed, the tensions noted above do invoke certain types of conflicts among treaties. For instance, there may be a conflict where trade liberalisation obligations could constrain effective implementation of other treaty obligations which govern the same subject matter related to sustainable development.

However, in international law, there is a generally accepted presumption against conflicts. As Pauwelyn explains, in theory every new treaty norm is created within the context of pre-existing international law, and the presumption is that this new norm builds upon the existing laws.\textsuperscript{204} Not only would an explicit conflict of norms need to be found in treaty text and proven by the claimant to limit an environmental or social measure, but if faced with two possible interpretations, one of which harmonises the meaning of the norms in question, the treaty will be “interpreted as producing and as intended to produce effects in

\textsuperscript{203} \textit{VCLT, supra note 1, art 30}; see also Pauwelyn, \textit{supra} note 172 at 361-85.

\textsuperscript{204} See Pauwelyn, \textit{ibid} at 241; Grossen, \textit{supra} note 176.
accordance with existing law and not in violation of it”. 205

For a trade tribunal, or as is more likely in this field, for a regulator charged with interpreting a new trade obligation and how it will apply to efforts to secure more sustainable development in their sector of economic law and policy, it is therefore important under VCLT Article 31 to look first to other provisions in the trade treaty in question, to see if there is further guidance provided in their ordinary meaning, in the context of the treaty, in light of its object and purpose, that can assist in interpreting the scope and application of problematic obligations. If little guidance appears in the text itself, an analysis might also be conducted under the lex posteriori and other rules of the VCLT at Article 30. But before applying formal rules, a careful analysis of the other provisions of the economic treaty in question is important, particularly as Parties may have included other provisions that are part of the treaty context and specifically address the issue being raised, or have made explicit references to further lex specialis, such as environmental or human rights treaties which govern the same subject matter.206 A careful search by the regulator may reveal textual solutions (or relevant ambiguities) in the trade or investment treaty itself. Certain types of provisions that could be present, particularly given Parties’ tendency to innovate in regional or bilateral trade and investment agreements, may be used to address a concern, avoiding a prima facie conflict of obligations.

From this textual interpretation viewpoint, other provisions in the treaty are therefore doubly important. In the examination of the terms of a trade or investment treaty, the interpretive rules of the VCLT will be relevant. The customary principle of integration can be taken into

205. Right of Passage over Indian Territory (Portugal v India) (Preliminary Objections), [1957] ICJ Rep 3 at 142.
account in the interpretation of the terms of the trade and investment agreement itself.\textsuperscript{207} A great deal turns on the specific mechanisms agreed by the Parties to the trade or investment accord, and whether these measures include ways to integrate social and environmental priorities in order to prevent or at least mitigate the impacts in question.\textsuperscript{208}

\textsuperscript{207} VCLT, supra note 1, art 31(3)(c); French, supra note 127; Gardiner, supra note 180 at 288-91 (“[t]hat article 31(3)(c) may have a useful role in handling such potential conflicts has been considered in academic study, in the work of the ILC and in some instances ... invoked in ... rulings of courts and tribunals ... A particular issue in the realm of treaty implementation is what account is to be taken of developments in international law, particularly the striking emergence of new specialist fields such as environmental law and human rights law ... the Court did give a clear indication that developments in environmental law were to be taken into account, and did so quite clearly in a context of treaty interpretation” at 331). See also Al-Adsani, supra note 176 (“[t]he Convention should so far as possible be interpreted in harmony with other rules of international law of which it forms part ...” at para 55); Gabčíkovo-Nagymaros Case, supra note 110; Legal Consequences for States of the Continued Presence of South Africa in Namibia (South West Africa), notwithstanding Security Council Resolution 276 (1970), Advisory Opinion, [1971] ICJ Rep 16 at 31 (“[a]n international instruments has to be interpreted and applied within the framework of the entire legal system prevailing at the time of the interpretation” at para 53); Iron Rhine, supra note 9 at 58 (“[a]n evolutive interpretation, which would ensure an application of the treaty that would be effective in terms of its object and purpose will be preferred to a strict application of the intertemporal rule” at para 80). See also International Law Commission, Report of the Study Group on Fragmentation of International Law: Difficulties Arising from the Diversification and Expansion of International Law, UNGAOR, 58th Sess, A/CN.4/L.682 (2006) at 206-44.

\textsuperscript{208} VCLT, ibid, art 31(3)(c) (the VCLT at art 31 permits interpretation to take into account, in addition to context and in light of the object and purpose, at art 31(3)(c) any relevant rules of international law applicable in the relations between the Parties); see also Pauwelyn, supra note 172 at 251-56; Sinclair, supra note 176 (who suggests art 32(3)(c) may be taken to include not only the general rules of international law but also treaty obligations existing for the Parties, and customary law at 119); Sands, supra note 176 at 103 (who notes that in the sense of art 31(3)(c), the treaty being interpreted retains a primary role).
In this respect, concerns raised by impact assessments and reviews become opportunities for the principle of integration to be taken into account in interpreting the treaty. First, the regulator can examine the economic treaty in question for provisions that would prevent the trade or investment disciplines from constraining the regulatory flexibility of the Parties for social and environmental purposes in the field of sustainable development. In the terms of Kelsen, there may be provisions in the economic treaty which grant a series of permissions, providing the Parties with exceptions to certain disciplines, where it can be shown that the disciplines might unduly constrain measures necessary to achieve other legitimate policy objectives. Should the overall treaty follow overwhelmingly along economic liberalisation in its context and structure, this could influence interpretation away from the preferred “integrated” outcome. However, general and specific exceptions, if found in the operational texts of the treaty, may provide clear exemptions that permit the sustainable development measures to be adopted. Similarly, provisions in a trade treaty itself or its preamble might set out an order of precedence between the accord and other treaties. If these provisions seem clear, the regulator would simply look, in good faith, to the context and the treaty object and purpose to confirm their ordinary meaning.209

The context will include the treaty text, with its preamble and annexes, along with any agreement relating to the treaty, and also any instrument made by one or more Parties.210 If notes appear in an annex to the accord, clarifying that the treaty will not apply for certain economic sectors, such notes would be considered part of the treaty context, in addition

See Gardiner, supra note 180; see also Aguas del Tunari v Bolivia (2005), ARB/02/3 (International Centre for Settlement of Investment Disputes) at para 21 (which notes the Vienna Convention does not privilege any of these three aspects of the interpretation method) and Humphrey Waldock, “Third Report” (UN Doc A/CN4/167) in Yearbook of the International Law Commission 1964, vol 1 (New York: UN, 1965) at 20 (UNDOC. A/CN4/SER.A/1964) (which noted the need to interpret the treaty as a whole in good faith).

210. VCLT, supra note 1, art 31.2.
to any further agreements provided in the annexes.\textsuperscript{211} There is also the possibility to take into account any subsequent agreement between the Parties regarding the interpretation of the treaty or the application of its provisions, and this might include a subsequent joint statement between the Parties clarifying how the trade and investment rules should be interpreted to take customs into account.\textsuperscript{212}

Second, the regulator may find that there are provisions in the trade or investment agreement to secure environmental and social cooperation, or that such provisions run alongside the trade agreement in a separate accord. In Kelsen’s terms, these accords might include permissions or prescriptions to cooperate on key environmental and social problems, as well as mechanisms to investigate situations in which laws appear to be weakened or not enforced, and even in some cases, permissions to provide resources, capacity-building and other support for programs to address trade-related environmental and social concerns. Again, VCLT rules will be relevant to interpretation. There may be clearly operational terms of the treaty committing to ensure cooperation on environment, labour or sustainable development matters, and the regulator can consider these in context, and in light of any provisions showing a sustainable development object and purpose. Annexes that are provided can be taken into account as part of this context, as will side agreements which were made between all the Parties in connection with the conclusion of the treaty, and there may also be separate memoranda of agreement which, if they were accepted as related to the trade and investment treaty by the other Parties, can be considered authentic means for interpretation.\textsuperscript{213}

Third, integrated substantive trade or investment liberalisation rules

\textsuperscript{211} Ibid; in connection with the conclusion of the treaty that is accepted by the other Parties as an instrument related to the treaty, see art 31.2(b); if made by all the Parties in connection with the conclusion of the treaty, see art 31.2(a).

\textsuperscript{213} VCLT, ibid, arts 31.2, 31.2(a), 31.2(b); Gardiner, supra note 180 at 265-75.
may be included in the economic treaty itself, delivering sustainable development benefits through increases in liberalisation in targeted sustainable sectors of the economies, or for certain types of goods or services that meet an internationally agreed Sustainable Development Goal. Essentially, in Kelsen’s terms, the States would need to include prescriptive provisions that oblige the Parties to liberalise trade or investment in specific economic sectors that they agree will contribute to sustainable development. Again, the regulator might seek integral provisions which agree to promote trade in sustainable goods and services, or to develop new markets, together with annexes, side agreements, or separate memoranda of agreement. Such provisions, if the regulator finds them included in the text of the treaty, can assist in avoiding conflicts, and may have greater weight than turning to documents exchanged during treaty negotiations as *travaux preparatoires* as supplementary means of interpretation. From the textual viewpoint, therefore, it is important to consider the further provisions of a new economic treaty, particularly inasmuch as they might avoid conflicts of obligations.

214. *VCLT*, *ibid*, art 31(3)(a) (which includes any subsequent agreements between the Parties as to interpretation or application of its provisions. Art 31(3)(b) also includes any subsequent practices in the application of the treaty which establish agreement of Parties regarding its interpretation. Gardiner stated, “an agreement as to the interpretation of a provision reached after the conclusion of the treat represents an authentic interpretation by the parties which must be read into the treaty for the purposes of its interpretation”, Gardiner, *ibid* at 34, 216-25). “Reports of the Commission to the General Assembly” (UN Doc A/6309/Rev.1) in *Yearbook of the International Law Commission 1966*, vol 2 (New York: United Nations, 1967) at para 14 (UNDOC. A/CN4/SER.A/1966/Add.1); see also *Kasikili/Sedudu Island (Botswana v Namibia)*, [1999] ICJ Rep 1045 at para 49.

215. *VCLT*, *ibid*, art 32 (provides for supplementary means of interpretation to which recourse is often had, but which are used to confirm the meaning resulting from the application of art 31, or to determine meaning if the ordinary meeting in context and in light of the object and purpose is either left ambiguous or obscure, as per art 32(a) or leads to a result which is manifestly absurd or unreasonable, art 32(b)). See Gardiner, *ibid* at 316-19.
As mentioned above, a further dimension of analysis is also important, informed by advances in international relations theory. Few international treaties today are simply textual contracts among States. As John Ruggie and Stephen Krasner have suggested, to understand the norms found in international treaties and how they are implemented, it is important to analyse the implicit understandings between a broad range of actors in a treaty regime, not only the formal views of States.216 A regime is an institution that might coalesce or be structured around certain legal rules and certain formal organisations, but goes well beyond them, and develops iteratively.217 Such regimes, as posited by John Vogler, can be defined as “sets of implicit or explicit principles, norms, rules and decision-making procedures around which actors’ expectations converge in a given area of international relations”.218 Principles, norms, rules and decision-making procedures are all necessary parts of an international treaty regime, which exists to achieve the common object and purpose of States and other international actors.219

Regimes, in international relations theory, therefore, can be

described as governing specific issue areas in an interactive way.\textsuperscript{220} This distinguishes them from broader international orders which imply an authority superintending over a wide range of institutions and issues.\textsuperscript{221} As such, regimes are more “specialised arrangements that pertain to well defined activities, resources or geographical areas and often involve only some subset of the members of international society”.\textsuperscript{222} As Vogler observes, the boundaries of a regime are thus determined partly by perceptions of the extent and linkage between issues. A regime analysis of trade and investment treaties calls attention to the way that principles, rules and decision-making procedures develop, interact and evolve in one “sub-system”, focusing on the converging expectations of a group of international actors. As noted by Stephen Tooke and Jutta Brunnée, regime analysis can serve the study of international law, drawing on the “inter-actional” behaviours of legal subjects and rules originally observed by Lon L Fuller.\textsuperscript{223} Inter-actional regimes, as they note, coalesce around international treaty commitments, which evolve and deepen over time through interactions between states and non-state actors, shaping and being shaped by the norms and rules, knowledge and networks generated by the regime.\textsuperscript{224}

From this perspective, both the “hard” and “soft” law between Parties to a treaty (or a series of treaties) evolves with the regime, engagement

\begin{footnotes}
\item[221.] Vogler, \textit{ibid} at 20-43.
\item[222.] Young, supra note 220 at 23.
\item[224.] See Brunnée & Tooke, “International Law and Constructivism”, \textit{ibid} at 19-74; see also Jutta Brunnée & Stephen Tooke, “Persuasion and Enforcement: Explaining Compliance with International Law” (2002) XIII Finnish Yearbook of International Law 1 at 1-23.
\end{footnotes}
a broader spectrum of actors than the States in its implementation.\textsuperscript{225} A regime may start with a legally binding agreement with broad participation but shallow substantive commitments, then deepen in substantive content and engagement of more and better informed actors, leading to greater compliance over time. As such, the emergence, evolution and effects of normative systems can coalesce around a particular object and purpose in international law, reinforced by “epistemic communities” which share scientific information and data.\textsuperscript{226} In certain circumstances, it may be undesirable to negotiate seemingly strong international treaties without first going through a careful, incremental process of regime-building. Without it, formal legal commitments are unlikely to be meaningful; States may simply assent with no intention of complying, or no capacity to comply.\textsuperscript{227} As Brunnée and Toope suggest, once a contextual agreement (such as a framework convention) initiates the development of self-reinforcing norms and institutions, regimes can then evolve in the direction of deeper substantive legal commitments. A steady building process, focused on the object and purpose of the treaty, may yield increasingly complex and sophisticated regimes of nearly universal application.\textsuperscript{228} For other treaties on sustainable development, such as the 1992 \textit{UNCBD}\textsuperscript{229} and the 1992 \textit{UNFCCC};\textsuperscript{230} it has been convincingly argued that States established framework agreements which commit to certain common objects and purposes, and a process by which further more detailed and specific protocols are negotiated.\textsuperscript{231} In emerging trade and investment regimes, from this perspective, it is possible that while agreed provisions appear likely to generate the tensions discussed above,

\begin{thebibliography}{9}

\bibitem{227} Brunnée, \textit{ibid} at 5-6.
\bibitem{228} \textit{Ibid} at 33-37.
\bibitem{229} \textit{Ibid}.
\bibitem{230} \textit{Ibid}.
\bibitem{231} \textit{Ibid} at 37-38.
\end{thebibliography}
as the regime continues to evolve, new purposes can be accepted by the Parties, and new operational instruments negotiated to take evolving customary law into account. For instance, even if the WTO Agreements did not originally include sustainable development as part of the purpose, and even if there were WTO Members that had persistently objected to a principle of integration in customary law, the WTO may still be able to evolve as a regime for an eventual acceptance of this objective, taking into account an integration principle in certain areas of its work, and in that context, new obligations may be negotiated within the regime framework.

Whether one departs from a purposive, a textual or a regime perspective, if it is desirable to integrate social and environmental concerns into trade treaties for sustainable development, either for sound international policy reasons, or out of respect for an emerging customary principle of integration, or simply to achieve a common textual sustainable development goal that is set as an “object and purpose” of the trade and investment treaty instrument itself (either in a new accord, or as a new commitment while a treaty and investment regime evolves), the question remains as to which provisions might best be interpreted as doing so effectively. More research is necessary to identify and understand the types of obligations that might be included, in a manner similar to the FAO Seed Treaty Article 6, to add clarity to a commitment for sustainable development in an international trade and investment treaty.232

IV. Conclusions

In international debates on trade and investment, the environment and human rights, there have been significant concerns about the sustainability of entering into economic agreements which might lead to serious environmental and social impacts. In light of two decades of global and regional “soft law” commitments to sustainable development

through trade and investment, States may have legitimate expectations that these concerns will be addressed. Given the extensive global consensus on the importance of sustainable development, particularly if sustainable development has been included by Parties as part of the “object and purpose” of trade and investment treaties, or has an interstitial influence on the process of economic treaty negotiations, certain customary norms may be useful to address the tensions. The principle of integration, as defined in Principle 4 of the *Rio Declaration* and supplemented by social considerations from the 2002 *JPOI*, can be considered particularly relevant for trade, investment and other economic policy-making. Notwithstanding its potential interpretive weight as part of the object and purpose of a treaty, a preambular reference alone in a trade or investment treaty may not provide a comprehensive response to the tensions that are being identified in assessments and current political debates. By applying greater creativity and craftsmanship in treaty drafting, increasingly adopting additional measures that address actual environmental or human rights tensions and concerns, States can convert trade and investment law tensions to opportunities for sustainable development. As tribunals and regulators take up these accords for implementation and enforcement, such mechanisms can and should be interpreted in light of the emerging integration principle, supporting the achievement of global Sustainable Development Goals.
